

# Business Analysis

**Building a bridge between business and technology - Worldgate business analysts close the gap between the functional and technical areas by working with people.**

Worldgate business analysts understand our customers and strive to deliver successful IT projects for our clients. Our business analysts have successfully supported a number of school districts as part of both large and small scale IT implementations. At Worldgate, our business analysts take pride in knowing the work we do enables our nation's school districts to improve education.

We define the role of business analyst as the bridge between business processes and technology solutions. Our business analysts work to close the gap between the functional and technical areas by working with people. By working with our client stakeholders across the organization, our analysts ensure technology is supporting the client to meet the needs of their business. Our analysts take core business requirements and specialized technical knowledge to work to advance our clients' Information Technology objectives. Our mission is to ensure delivery of real organizational benefits through the effectiveness of the business analyst role.

**Worldgate is nimble and strives to deliver customized solutions which fit our clients' needs. We have found the following business analyst skillsets essential to any successful enterprise project:**

Precise written and verbal communication

Knowledge of how systems and processes work together

Ability to identify and mitigate risk

Skill to deliver clear functional and technical requirements

Experience to foster collaboration within an organization

Ability to open productive communication channels
