

Project Management

Your success is our success - Worldgate provides experienced IT project management services that are built upon our client's success.

Worldgate project managers understand our customers and strive to deliver successful IT projects for our clients. Our project managers serve in a number of school districts leading both large and small scale IT initiatives. At Worldgate, our project managers take pride in knowing that the work we do enables our nation's school districts to improve education.

Worldgate project managers have experience in implementing strategic enterprise systems within complex organizational environments. Our project managers leverage Worldgate's proven ISO 9001:2008 certified project management processes and certified PMP/PMI principles to lead IT projects. We work with many different management tool suites and report back to our client stakeholders with accurate and timely information about their projects.

As established in our ISO 9001:2008 Quality Management System, Worldgate continually evaluates our projects to ensure complete client satisfaction. We work with our clients to establish success metrics associated with each project as outlined in the project charter. These success metrics will be reported in each meeting and tracked within project status reports. Worldgate uses project status reporting to gauge project status and customer satisfaction to ensure our project managers are delivering at the highest level for our clients.

Worldgate believes it is important to incorporate change management best practices in our project management methodology. In navigating successful enterprise system implementations, Worldgate has found that effective change occurs by working closely with organizational leaders to build strong communication plans which engage the entire organization as a part of the change. Worldgate's clients benefit from our diverse experience and lessons learned which continue to shape our project management practice.
